DACS LABS

Job-Beschreibung

QA Engineer (m/f/d)

Location: Erkrath near Düsseldorf, Germany   Type: Full-time

Join the Future of Gaming at DACS Labs!

At   DACSLABS, we're revolutionizing gaming with our cutting-edge progressive download   technology, delivering seamless, instant access to epic computer game experiences. We're looking for a passionate QA Engineer   with a love for gaming. If you're excited to test groundbreaking tech and play a role in shaping the future of gaming, join us!

Games-Career.com ist ein Angebot von:

What You'll Do

- Own our QA: Improve existing processes, implement best practices and shape the future of our internal and external QA.

- Test our Tech Stack: Dive into testing our   RESTful API   to convert native computer games into ROCKITPLAY FastStart images, ensuring functionality, security, and scalability for game performance.

- Enhance our ROCKITPLAY StreamInstaller: Validate the installer's progressive download, ensuring smooth streaming of game content across network conditions.

- Enhance the Web App: Test our web app ROCKITPLAY Mission Control for usability, cross-browser compatibility, creating a seamless experience for managing game build conversions.

- Automate and Optimize: Build automated test scripts for functional, regression, and integration testing, integrating them into CI/CD pipelines.

- Collaborate and Innovate: Team up with developers, product managers, and DevOps to catch issues early, provide detailed bug reports, and elevate our QA processes, all while fueling your passion for gaming.

What You Bring

- Passion for Gaming: We want you to be a gamer at heart!

- Experience: 5+ years in QA engineering, with hands-on experience testing RESTful APIs, desktop applications, and React web apps. Demonstrated ability to deliver clear, actionable, and data-driven reports to leadership teams. Self driven with a proactive approach to driving results.

- Technical Skills:

  - Proficiency in API testing tools (e.g., Postman, Apidog).

  - Experience with automation frameworks (e.g., Selenium) and scripting in e.g., TypeScript or Python.

  - Knowledge of React testing (Jest, React Testing Library) and cross-OS testing.

Seite 2 von 3

- Bonus: Understanding of the operation of gaming platforms (e.g. Epic Games Store, GoG Galaxy, Steam), basic understanding of computer game file I/O and gaming engines (e.g., Unity, Unreal) and hyperscalers (AWS, Azure, OCI); knowledge of CI/CD tools.

- Mindset: Analytical problem-solver with a sharp eye for detail, strong communication skills, and a commitment to delivering epic gaming experiences.

- Education: Degree in Computer Science, Engineering, or equivalent experience.

Why DACS Labs?

- Join a vibrant team pushing the boundaries of gaming technology.

- Work in a hybrid environment with opportunities to grow and make an impact.

- Collaborate on projects that redefine how gamers enjoy their favorite titles.

- Test and play with cutting-edge gaming tech every day!

Ready to Level Up?

Apply now by sending your CV and a brief cover letter to jobs@dacslabs.com. Tell us why you're passionate about gaming and how you'll help us deliver flawless experiences for players. We can't wait to team up!
