Job description

As a **Senior Software Developer (Java/ Backend)** you will be part of our agile, cross-functional and international development team. You will drive the development of new features on backend side as well as maintain and improve the current code of our new mobile Games. You will be responsible for creating a game that will be played by millions of players. Your technical and architectural expertise will be crucial to our game's success.

Your mission:

- Responsibility for the realization of the backend architecture for one of our new games in Java 8 and latest frameworks like spring 4.x
- Designing and implementing high availability systems and service-oriented architectures and game features
- Developing, realizing and optimizing database designs
- Education and technical guidance for other developers on Java specific topics
- Working in close collaboration with Client Developers, Game Design, QA and System Administration
- Maintaining and extending our development tools and environment

□
Your Profile:

- A university degree in computer science or an equivalent training and experience as IT specialist
-
