Job description

RetroBrain R&D has been developing therapeutically and preventive video games for dementia patients and healthy senior citizens since 2014. Our 22-strong, interdisciplinary and age-diverse team is jointly developing and establishing the memoreBox, the eHealth solution from RetroBrain. Since 2015 it is considered "a benchmark in the therapeutic gamification industry" (LIFT Basel). The memoreBox reduces the effects of age-related diseases such as dementia, reduces the risk of falls and promotes inclusion in retirement homes through joint activities. The memoreBox is scientifically evaluated at the Charité Berlin, the University Medical Center Hamburg, the Humboldt University, the Diakonie and with BARMER, among others. RetroBrain is supported by various sponsors (including the Charité Foundation, Microsoft and the City of Hamburg) and has received a number of awards, such as the "Digital Health Ger-many Award" from CISCO, the Social Business Award (SensAbility) from WHU, the Rudi-Assauer-Prize and many more.
