Job description

As a DevOps Engineer, you work in a cross-functional team within our central technology department. Your team develops and operates the stack used by our games. Additionally, you support and consult the integration of new games into our tech stack. As generalist you enjoy both, ensuring availability & performance of the stack and collaborating with the game teams. With your expertise, you create an awesome development and game operation experience.

you focus on automation of integration, deployment and operation in a private and public cloud environment.

Sounds great? Then check if you've got the skills required and apply! We're always looking to add perceptive, hard-working and friendly people to our family!
